INTRODUCE

AI & Cloud Strategy Architect & Technology Leader | LLM · GenAI · MLOps · HPC Infrastructure | Leading AI Innovation Projects for Enterprises & Financial Institutions

I am a senior engineer with 15 years of experience leading digital transformation through the convergence of cloud and AI technologies, including AI/ML architecture (AIaaS), MLOps operations, and team leadership.

Beyond technical implementation, I focus on formulating and executing AI–Cloud integration strategies that directly align with organizational business goals.

I have extensive hands-on experience across finance, telecommunications, manufacturing, and public sectors, covering AI service roadmap planning, cloud architecture standardization, team leadership and performance management, project governance, full-stack development (FE/BE), and end-to-end system design (planning–architecture–operations).

In particular, I have led projects that required deep technical strategy, such as building large-scale Generative AI (LLM) training infrastructure, designing data lake pipelines, and advancing MLOps architectures—demonstrating both technical insight and business execution capability.

At AWS, I worked with enterprise clients including Samsung Electronics to establish cloud operation strategies, security governance, and service complexity-reduction roadmaps, which improved overall infrastructure efficiency across the organization. I also led FinOps consulting initiatives to optimize enterprise-wide cost structures, reduce resource waste, and implement stabilization strategies for large-scale environments.

In parallel, I directed efforts in service design, operational automation, user-feedback integration, quality improvement, and issue-management processes to build a stable and sustainable service-operations framework.

I place strong emphasis on analyzing emerging technologies, preventing technical debt, and fostering a culture of knowledge sharing. Through AI paper reviews, open-source contributions, and internal technical seminars, I have continuously strengthened organizational technical capability and collective learning culture.

With agility and high organizational adaptability, I effectively coordinate mid- to long-term objectives, communicate across stakeholders, and lead cross-functional collaboration.

As a leader who bridges technology and business strategy, I strive to maximize team performance and drive organizational growth by spearheading AI & Cloud innovation initiatives.

EXPERIENCE 총 19년 3개월

2022. 12 ~ 2025. 06 2년 7개월

Amazon Web Service(AWS)

Technical Account Manager

Samsung Gaming Hub(MX)

- Led Galaxy Gaming Hub cloud infrastructure operations and maintenance, conducted real-time performance analysis and implemented proactive issue detection to minimize service downtime risk
- Communicated with diverse stakeholders from engineers to C-level executives to address strategic tasks and long-term projects with agility
- Designed and established an automated monitoring and response process to prevent user churn and enhance system reliability
- Developed and executed a service stability roadmap, applying automation to key functions and improving incident response speed by approximately 30%
- Collaborated and led a 10-member cross-functional technical team (internal and external), establishing consistent operational processes across departments

Samsung Big Data Center(DX)

- Supported operation of a 30PB-scale Galaxy user log pipeline, enhancing stability and scalability of the data collection and analytics platform
- Managed enterprise-wide customer DB and analytics systems, designed DR architecture and incident response processes to ensure service continuity
- Optimized data processing and analytics architecture to reduce operational complexity and improve performance
- Established a data governance and DR enhancement roadmap, applying phased architecture standardization to strengthen global service stability
- Reduced annual operational costs by approximately 8% and improved resource efficiency by 15% through performance optimization

Samsung Research(SR)

- Executed DR design and Lambda/ECS migration for a 42,000 RPS, 4PB-scale DWH and analytics platform project
- Designed multi-GPU HPC infrastructure for Bixby LLM training (NCCL, Infiniband, RDMA) and led EFA performance testing-based POC
- Implemented GenAI model drift detection, retraining, and DevOps-integrated operations consulting, reducing system downtime by 10% and improving service reliability
- Developed an AI infrastructure modernization strategy and a phased migration roadmap, improving LLM training efficiency by 20%
- Collaborated with over 10 internal and 10 customer-side engineers, establishing and adopting HPC infrastructure operational standards

Samsung Digital Appliance(DA)

- Collaborated with the Samsung DA security team to establish and apply cloud security policies, reducing incidents by 10% and enhancing overall security posture
- Applied new cloud technologies to reduce service operation costs by 10% and improve infrastructure scalability
- Led architecture standardization and documentation initiatives, increasing system reusability and operational efficiency
- Developed security and cost-optimization policy roadmaps, establishing cross-departmental collaboration structures to improve management efficiency

- Reduced annual OPEX by approximately 5% and improved new project response speed by 30% through standardized documentation practices

ETC

- Presented the "SageMaker Fine-Tuning with Experiments" seminar for Samsung Electronics, sharing best practices for building and optimizing model experimentation environments
- Delivered the external seminar "Fine-Tuning & Evaluation of Foundation Models on SageMaker," introducing enterprise-level use cases and optimization strategies
- Presented at the internal "Generative AI Bootcamp – SageMaker JumpStart," co-developing training materials and leading internal enablement sessions
- Led the external "Generative AI Bootcamp – RAG Essentials: Bedrock & Q in Action" seminar, conducting hands-on sessions on RAG architecture implementation
- Led hands-on workshops for enterprise customers on Generative AI (PoC and model inference), guiding end-to-end solution implementation
- Developed a Python-based automated cost reporting and visualization tool to support Samsung billing monitoring and resource optimization
- Delivered internal AI/ML knowledge-sharing sessions and technical documentation to promote cross-team enablement
- Hosted customer-focused GenAI/ML technical sessions (SageMaker, Model Serving, MLOps), providing PoC architecture guidance
- Drove cost-optimization and service simplification architecture initiatives, improving operational efficiency and reducing expenses
- Conducted pre-launch risk assessments, DR architecture design, and global leadership collaboration to prevent customer-impacting issues

- Skill Keywords

AWS GenAI | AWS Security & Governance | AWS Architecture & Infra | Cloud Cost Optimization (FinOps) | Multi-GPU Cluster Infra (HPC, EFA, RDMA) | Cross-functional Collaboration & Leadership | MLOps / LLMOps, IaC (Terraform, CDK) | Accelerated Computing | NLP / LLM | NVIDIA NCCL | Big Data Analytics (EMR, Glue, Redshift) | AI/ML Solution Design | DevOps Automation & Observability

2019. 12 ~ 2022. 11

3년 0개월

KB Kookmin Bank

Finance AI Center(Manager)

Enterprise-Wide AI Financial Assistant (AICC) MLOps Initiative at KB Financial Group

- Led the group-wide KB Financial AICC MLOps project, designing AWS-based service mesh architecture (EKS, Istio) with traffic control and monitoring frameworks
- Built deep learning model serving and version management system using Ray Serve and BentoML, automating accuracy, reliability, and performance validation with optimized inference testing
- Conducted model serving framework stability verification and performance analysis (Performance Analyzer), and participated in vendor technical evaluations and selection reviews
- Optimized the KB-STAR NLP model (NER, morphological analysis, intent classification) and improved callbot serving architecture, achieving 30% enhancement in inference performance and operational stability
- Established AI assistant service advancement strategy and standardized operational framework, strengthening AICC platform scalability and improving service quality
- "은행원 대신 가상인간" 국민은행의 AI 금융비서 실험
- "내 손안의 금융비서" KB국민은행, 모바일 특화 AI 고도화
- KB국민은행 한글 자연어 학습 모델 'KB ALBERT' 개발 및 내재화 추진

KB Financial Group - AI Voicebot Deployment & Strategy Support (TF)

- Participated in the KB Financial Group-wide AI Callbot adoption TF, establishing the project's technical strategy and implementation roadmap
- Compared chatbot solution performance and reviewed potential AI startup collaborations, contributing to proposal evaluations and vendor selection process

- Reviewed hybrid cloud-based AICC architecture, planning network separation application and strategies to enhance security and operational efficiency
- Led the drafting of AI Callbot RFP (Requirements Definition Document), providing technical reviews on architecture, security, capacity, redundancy, and DR design
- Identified and evaluated generative AI technology partners, supporting in-house AI Callbot development strategy formulation and execution within KB Financial Group
- KB국민은행, 고령층 고객을 위한 '콜봇 서비스' 지원
- AI은행원 고객 접점 늘린다..KB국민은행, 콜봇 서비스 '똑똑' 전진 배치

Metaverse Banking Testbed Planning and System Development at KB Kookmin Bank

- Led the planning and development of the KB Financial Metaverse Testbed, designing virtual banking integration scenarios and preparing documentation for financial security and compliance reviews
- Took the lead in regulatory response and technical feasibility assessments with the Financial Supervisory Service, supporting policy coordination for new technology adoption
- Designed and developed a real-time user log analysis and storage backend system using AWS, Ray, Lambda, and Kubernetes
- Built a data pipeline and visualization dashboard based on user activity metrics (connection rate, event utilization, engagement status), designing gamified financial UX analysis scenarios
- Implemented a behavior-based analytics environment, contributing to the validation and strategic planning of KB's Metaverse financial channel
- KB국민은행, 로블록스(Roblox)로 '메타버스 금융' 시도
- KB국민은행, 메타버스·디지털자산·금융 접점 찾는다
- KB의 새 메타버스 실험…"현장감 살린 영업점포 구현 중"

Browser-Based Video Consultation System Development

- Led the planning and development of a browser-based, installation-free video consultation system POC to enhance remote customer service channels, designing and implementing a lightweight architecture using AWS Chime, WebRTC, Docker, and TypeScript
- Integrated AI video processing models based on MSCOCO and BodyPix, utilizing Tensor.js for real-time background removal and rendering performance optimization
- Established CI/CD pipelines (CodeDeploy, Jenkins), monitoring (Grafana/Prometheus), and log collection (EFK Stack) environments, defining an automated operations and quality monitoring framework
- Conducted user testing across employees and branch offices, preparing system enhancement reports to improve service stability and operational efficiency
- Achieved a 25% reduction in customer waiting time for remote consultations post-COVID, significantly improving accessibility and user convenience
- "어디서든 비대면으로" KB국민은행 "모바일 화상상담 서비스" 확대

KB Kookmin Bank - Corporate Credit Evaluation Crawler (Antoc)

- Led the planning and development of a credit evaluation automation crawling system POC, implementing Python-based modules for collecting corporate information, credit, patents, and technology data
- Designed Spring Boot-based batch scripts for corporate data storage and periodic updates, and developed REST API integration with the Android frontend
- Architected the loan evaluation automation process and validated data pipelines, reviewing workflow efficiency and proposing next-generation system architecture
- Reduced branch operational workload through automated evaluation workflows, establishing a foundation for over 1,000 annual task reductions
- Served as the technical validation phase for transitioning to an AI-driven credit evaluation system, laying the groundwork for next-generation financial assessment infrastructure

KB Kookmin Bank – Remote Account Opening System (Mobile Branch)

- Participated in the Mobile Branch project to drive innovation in non-face-to-face financial services, collaborating on the design and development of deposit and savings account issuance systems based on the IB Framework

- Led the integration of Customer Due Diligence (CDD/EDD) and Anti-Money Laundering (AML) processes, incorporating core banking security policies and financial regulatory compliance frameworks
- Integrated OCR functionality for resident ID (issuance date and facial recognition) and supported WebRTC-based real-time image capture testing, contributing to system stabilization during BMT phase
- Designed asynchronous architecture to handle large-scale traffic, collaborating with deposit and product teams to internalize financial domain knowledge and optimize development processes
- Achieved a 40% reduction in service downtime, stabilizing the non-face-to-face account opening process and enhancing overall user experience (UX)
- 앱·인증서 없어도 OK! KB국민은행, "모바일브랜치" 출시
- KB국민은행, "KB모바일 브랜치" 신규 가입 이벤트 진행
- 국민은행, 웹기반 "KB모바일브랜치" 출시…공인인증서 없이 상품가입

KB MyStar Consultation Record Analysis POC

- Conducted a POC to automate customer satisfaction evaluation, designing NLP processing and data labeling workflows using Konlpy, Mecab, and TensorFlow
- Analyzed 10 years of customer consultation text data from all KB branches, extracting key insights such as sentiment polarity and churn-related keywords
- Categorized customer satisfaction types and performed trend analysis, developing Dash-based visualization dashboards and reporting frameworks
- Produced marketing strategy reports based on data analysis outcomes, contributing to enhanced customer experience and strengthened brand trust

KB Digital Seal Similarity Analysis POC

- Executed a POC for seal image similarity analysis using OpenCV-based SSIM, SIFT, SURF, and ORB algorithms, validating CNN model performance and assessing service applicability
- Created customized training datasets reflecting seal image characteristics (angle, wear, ink density), conducting model testing and performance verification in real branch environments
- Collaborated with internal departments and technology partners to establish business strategies, achieving an 88% improvement in seal image recognition accuracy and quality consistency
- Led feasibility analysis and coordinated technical roadmaps among partner companies, laying the foundation for future commercialization

KB Credit Card Receipt OCR Accuracy Improvement POC

- Conducted a POC to enhance OCR accuracy for automating handwritten credit card slip entry across all KB branches, applying Tesseract-based model training and custom handwriting tuning
- Built a labeled dataset using Box annotation and designed an image preprocessing pipeline, improving handwriting recognition through LSTM parameter optimization
- Defined integration strategy with the nationwide branch card sales aggregation system, increasing recognition accuracy from 83% to 92%
- Proposed a full-scale implementation strategy based on OCR model validation results, contributing to automation of manual tasks and operational efficiency across branches

KB Kookmin Bank – Digital Signing Desk System (POC)

- Led the POC development of a pre-document preparation system to reduce customer wait times and improve branch congestion across all KB branches, overseeing process design and UX planning
- Designed tablet-based electronic document UI and structured data input flow, implementing HTML5 Canvas-based digital signature and encryption features
- Architected system integration with the existing queue management system, achieving a 50% reduction in customer wait times through pilot testing and improved branch operations
- Developed a pilot model for digital branch innovation, establishing the foundation for nationwide branch deployment
- KB국민은행, "미리작성 서비스"로 고객 대기시간 단축

9개월

NHN Diquest

TA Division(Freelance Manager)

LG U+ AICC Real-Time Advisor POC

- Developed a real-time chat-based advisor and customer satisfaction scoring system for LG U+ contact centers, including dialogue analysis and evaluation algorithms
- Designed a 30-channel WebSocket infrastructure with MongoDB message storage, and built a live dashboard UI for agent activity and satisfaction monitoring
- Processed post-call texts (e.g., filler word and stopword removal), generated session-level datasets, and implemented NLP models for intent classification and response recommendations
- Built daily batch retraining pipelines and deployed real-time inference environments with automated model serving workflows
- Achievements : Led internal training on system architecture and AI solution design, Contributed to the full-scale LG U+ AICC project acquisition and enhanced technical credibility in external solution proposals

Korea Student Aid Foundation IVR Modernization & VOC Analysis

- Built a data lake and ingestion pipeline for storing historical and real-time customer consultation texts, using Sqoop for MariaDB-to-HDFS transfer and HiveSQL query development
- Developed NLP preprocessing components including morphological analysis, NER tagging, sentence segmentation, tokenization, and POS normalization for advisor recommendation logic
- Designed batch retraining scripts and a model versioning repository to enable continuous model updates and performance improvements
- Configured Hadoop NameNode/DataNode with replication strategy, and conducted failover simulation tests to ensure system availability and recovery
- Achievements : Established core capabilities for expanding into AICC and STT/TA solution markets, Contributed to AI platform contracts in the finance sector and enabled packaged deployment offerings

ML-Based AICC Solution for Lotte Group

- Led development of an STT/TA solution for Lotte affiliates (Lotte Mart, Lotte Duty Free, Lotteria), including real-time dual DB replication (Master/Slave) and text preprocessing logic
- Built an analytics pipeline to summarize call content, classify consultation types, and extract key phrases from recent 5-minute conversations
- Developed AI-powered APIs for similarity scoring, silence detection, sentiment analysis, and customer complaint clustering
- Designed dashboard charts for real-time agent monitoring (call/wait status, departments, satisfaction metrics), and built RNN-based batch retraining and auto accuracy validation pipelines
- Achievements : Enabled successful adoption of TA systems by LG, Hanwha, and others based on the Lotte AICC deployment, Expanded NHN's STT/TA footprint into financial clients and regulated industries
- 롯데정보통신, 고객센터 전문 AI 상담 서비스 론칭

- Skill Keywords

Python, Java | AI/ML, AWS | AICC | STT/TTS, Konlpy | FastAPI | Model Serving | Django, Flask | NLP, Keras | SpringBoot | Redis | Hadoop, Spark | MariaDB

D.O Factory

SI Business Division(Manager)

Emergency Financial Aid System for Shinhan Bank

- Designed and launched a backend reservation system for loan screening targeting financially at-risk customers
- Configured scalable infrastructure with Nginx and Tomcat session clustering, including load balancing for high-traffic volume
- Refactored legacy business logic to reduce API load and improve system response time
- Developed an integrated information lookup UI and implemented secure file generation and FTP transmission logic
- Achievements : Ensured stable system performance during peak traffic and met Shinhan Bank's urgent service launch timeline, Automated secure data delivery pipeline, enhancing operational efficiency and data protection

Ministry of the Interior and Safety (MOIS) Data Lake Project

- Migrated and preprocessed 5TB of structured and unstructured historical data from the MOIS National Forum platform, and designed a distributed storage cluster architecture
- Executed Sqoop-based RDBMS-to-HDFS migration, optimized Hadoop reducer tasks, and developed rollback shell scripts to minimize downtime during schema conversion
- Configured Nginx + Tomcat session clustering and load balancing to enable zero-downtime deployment
- Migrated RDBMS data to HDFS using Sqoop and optimized Hadoop reducer performance
- Developed a real-time trending keyword system based on user access behavior, integrated into the live platform
- Achievements : Delivered a stable, large-scale data lake infrastructure for public-sector datasets, Improved end-user experience by enabling real-time keyword visibility through custom search logic

Hyundai Motor Company Smart Key Band (Android)

- Developed a native Android app for Hyundai's global smart key band product, enabling Bluetooth-based pairing with vehicles and real-time driving data sync
- Implemented real-time collection and transmission of sensor data (heart rate, distance, activity) to smartphones, and built a REST API server for unified event handling
- Solved Bluetooth module compatibility issues across multiple Android device models and ensured reliable synchronization with smart bands
- Designed a user-facing dashboard to visualize health data and implemented backend monitoring tools to track API response patterns
- Achievements : Delivered a stable BLE-connected IoT app experience across global Android devices, Reduced user churn and support incidents through effective compatibility handling and performance optimization

Icheon City Animation Expo Website Development

- Developed backend APIs and data models to support event information delivery and reservation functionality
- Interpreted client requirements and translated them into a complete site architecture and user experience design
- Managed the full development lifecycle and served as liaison between technical implementation and business goals
- Achievements : Delivered the project on schedule for a public-sector client, incorporating iterative feedback during development, Enabled mobile accessibility and seamless reservation flow, resulting in improved user engagement and satisfaction

NCS-Based Academic Management System for Kyungmin & Baekje Universities

- Developed a student–faculty consultation scheduling system and PDF export feature to streamline academic advising
- Led API documentation and visual testing using Storybook to enhance frontend–backend integration and UI consistency
- Resolved cross-browser issues and implemented web standards and accessibility improvements
- Achievements : Automated consultation reporting for faculty users, improving administrative efficiency across departments, Improved system usability based on feedback from real-world academic staff and operational teams

Mobile Website Performance Optimization for the Ministry of the Interior

- Refactored legacy source code and optimized business logic to enhance mobile responsiveness and system structure
- Executed JMeter and nGrinder-based performance tests (load, endurance, spike, breakpoint), with TPS report generation and project closure documentation
- Achievements : Resolved bottlenecks and validated system stability under real-world conditions, meeting public sector performance standards

- Skill Keywords

Java, Spring, MySQL | Hadoop, Sqoop | Tibero | React, Android | Bluetooth | Angular, Vue, Javascript | JMeter, nGrinder

2015. 04 ~ 2016. 06

ION Communications

ECM Development Team(Senior Engineer)

e-Form Online Electronic Contract System Enhancement

- Designed and developed a full online workflow for e-contract drafting, execution, field mapping, and transmission
- Incorporated frequently updated electronic document regulations and validity policies into the system for legal compliance
- Tuned OCR module parameters to improve Korean/English recognition accuracy; built REST API interface for automatic form classification
- Built an ElasticSearch cluster and optimized query performance, resolving disk usage imbalance across nodes
- Achievements : Launched the first non-face-to-face online contract system, secured contracts with major enterprises, and gained hands-on experience handling large-scale traffic in production

iDrive Electronic Document Management System (EDMS)

- Developed and maintained iDrive EDMS for document creation, approval, and disposal, with continuous functional enhancements
- Customized an OCR-based classification system for Korean/English contracts and improved recognition accuracy for various font types
- Participated in source optimization and menu structure design, enhancing performance of the NER-based classification engine
- Contributed to the company's first cloud-based EDMS deployment, enabling SaaS delivery for international customers
- Achievements : Handled large-scale traffic efficiently on AWS, reduced infrastructure costs, and closed overseas contracts through stable NLP-powered services

POSCO ICT Smart Grid Demand Forecasting System

- Developed a real-time dashboard for bi-directional energy data sharing between producers and consumers to monitor efficiency metrics
- Built an intelligent energy usage forecasting system to predict seasonal and temporal power demand patterns
- Designed ElasticSearch infrastructure (nodes, shards, clustering) and implemented read replica-based query distribution modules
- Visualized productivity and cost-efficiency metrics in real-time charts and developed external REST APIs for system integration
- Achievements : Gained expertise in managing high-volume data traffic and visualization, laying the groundwork for global smart grid expansion and domestic project wins

- Skill Keywords

Java, Spring, Python | ElasticSearch | OCR | AWS | BootStrap | RabbitMQ

2013. 04 ~ 2015. 03

Nexusware

SI Business Division(Manager)

LG U+ Uflix Movie Hybrid App Enhancement Project

- Served as Technical Project Lead
- Refactored Cordova-based hybrid app architecture and improved UI performance
- Built CI/CD pipelines with RabbitMQ and Jenkins for automated deployment workflows
- Leveraged Spring EnCache to reduce traffic load and enhance scalability through critical data caching

KT Telecop System Enhancement Project

- Extended ERP features using Spring and MyPlatform, with legacy code refactoring and performance tuning
- Developed RESTful API servers to support the monitoring service platform
- Proposed and implemented scalable, modular architecture based on technical discussions

PNS Groupware Development and Maintenance

- Acted as Project Manager
- Participated in building a new groupware system and handled routine maintenance and feature updates
- Modified business logic and implemented enhancements based on evolving requirements
- Reduced legacy codebase and gradually introduced test-driven development (TDD) practices

Organization Chart Synchronization Module

- Developed backend batch services to synchronize group org charts and employee records
- Built an interface to automatically reflect org/personnel updates into the internal messenger system

KISTEP (Korea Institute of S&T Evaluation and Planning) - Groupware Development

- Managed feature enhancements and development schedules based on user requests for groupware
- Developed component-level functionality for structured data entry and validation rule definition
- Configured reverse proxy using Linux and Nginx and contributed to server setup and deployment

Incheon Traffic Information Center - Real-Time Bus Route (BIS) Web Enhancement

- Developed a real-time web interface for visualizing city bus locations in Incheon
- Implemented bus location markers using Flash ActionScript for the monitoring view
- Built backend logic to synchronize live transport data via real-time control system APIs

Informatization Village Data Architecture Analysis & Design (Ministry of the Interior)

- Conducted system-wide analysis and design for integrated and distributed data architecture of the MOIS Invil platform
- Standardized the data structure and normalization process to support scalable system-wide deployment

Ministry of Government Legislation - CI/CD Environment Setup

- Built a CI/CD deployment system for test, staging, and production using build automation tools

- Skill Keywords

Java, Spring | Cordova, Javascript | Oracle11, Cubrid | ActionScript | ExtJS | RabbitMQ | DA#, Erwin | Linux, Jenkins, Apache

LLM-RDMA-MLOps-Lab

- A hands-on blueprint for enterprise-grade distributed LLM training and serving operations, featuring performance, scalability, and observability best practices.
- Contributor
- https://github.com/eunki-7/llm-rdma-mlops-lab
- Github Stars: stars 0

GPU RDMA Communication Lab-10× A100

- A deep-dive, hands-on lab that isolates multi-GPU, multi-node communication for HPC/AI workloads—now scaled to 10× NVIDIA A100.
- Contributor
- https://github.com/eunki-7/exa-comm-a100
- Github Stars: stars 0

Music2Sheet-MLOps Version

- Architected and led development of an enterprise-grade AI pipeline converting music audio to sheet music using Hugging Face pretrained models, FastAPI inference service, and fully automated CI/CD (Docker + GitHub Actions).
- Owner
- https://github.com/eunki-7/music2sheet-mlops
- Github Stars: stars 0

MCP Auto-Router Chatbot-MLOps Version

- Enterprise-grade chatbot with AWS ECS deployment, SageMaker fine-tuning, CI/CD automation, and monitoring stack (Prometheus + Grafana).
- Owner

- https://github.com/eunki-7/mcp-auto-router-chatbot-mlops
- Github Stars: stars 0

Lightweight PDF RAG Chatbot

- A lightweight PDF-based RAG chatbot with fallback model inference, built using HuggingFace Transformers and Gradio.
- Owner
- https://github.com/eunki-7/lightweight-pdf-rag-chatbot-portfolio
- Github Stars: stars 0

MCP Auto Router Chatbot

- A multi-model routing chatbot that automatically selects the best model based on query type, demonstrating MCP-style AI model orchestration.
- Owner
- https://github.com/eunki-7/mcp-auto-router-chatbot-portfolio
- Github Stars: stars 0

Echo FLAN2SQL (Voice-to-SQL AI)

- A voice-driven SQL generator using Wav2Vec2 for speech-to-text and FLAN-T5 for SQL translation, delivering instant query results from mock databases.
- Owner
- https://github.com/eunki-7/wav2vec-flan-sql-portfolio
- Github Stars: stars 0

Certifications

- AWS Certified Machine Learning - Specialty
- CKA (Certified Kubernetes Administrator)
- CKAD (Certified Kubernetes Application Developer)
- Google TensorFlow Certificate (2–5 Years)
- AWS Certified Cloud Practitioner
- Oracle Certified Java Programmer (OCJP)
- 정보처리기사
- 데이터아키텍처준전문가 (DAsP)
- SQL개발자 (SQLD)
- 리눅스마스터 2급
- 컴퓨터활용능력 1급
- 멀티미디어콘텐츠제작전문가
- 사무자동화산업기사
- MOS Excel 2007 Expert
- 인터넷정보검색사 1급
- 워드프로세서 1급
- 정보기기운용기능사
- 무선인터넷관리사
- 컴퓨터운용사
- 웹디자인기능사
- GTQ 포토샵 1급 외
